Powered label dispensers

LABELMATE label dispensers are a quick and easy way to **dispense individual labels**. They use a peel and present design: as the material passes through the dispenser, the label is peeled away from the backing material and presented at the front of the unit where it waits to be picked up by the operator. With different models to choose from, these label dispensers **can handle virtually any job** you may have for them.

Label rewinders

Rewinders are efficient time savers that **rewind material into clean and uniform rolls**. Label rewinders wind up labels into a roll as they come out of a printer. If you don't use a rewinder, you have to gather up the labels by hand once the printing job is finished. A rewinder is much more **convenient and saves you time**.

CHOOSING YOUR REWINDER

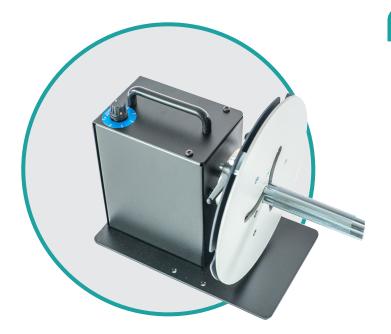

With over 30 different possible configurations, Labelmate offers a rewinder for every application, for all printer types and for every budget. Hereby an overview of the different families and main features.
